

# DIGITAL CAMERA HAVING A TILTING/SWINGING MECHANISM

## ABSTRACT OF THE DISCLOSURE

A digital camera includes a photographic lens that is  
5 provided on a camera body of the digital camera so that  
an optical axis of the photographic lens is stationary with  
respect to the camera body; an image pick-up element on  
which an image of an object to be photographed, which is  
10 formed through the photographic lens, is impinged; and a  
tilting/swinging mechanism, provided in the camera body,  
for tilting and/or swinging the image pick-up element  
relative to a plane orthogonal to the optical axis.
